```

Ejemplo de líneas de código generadas según caso

```

private static String clickButton2(String resId){

    String stm = "onView(withId(R.id."+resId+")).perform(click());\n\n";

    return stm;
}

private static String inputText(String resId){
    // onView(withId(R.id.editTextUnirse)).perform(replaceText("sdfsdf"),closeSoftKeyboard());
    Random rm = new Random();
    String input = "" + (char) (rm.nextInt( bound: 26) + 'A') + (char) (rm.nextInt( bound: 26) + 'a')
        + (char) (rm.nextInt( bound: 26) + 'a');

    String stm = "onView(withId(R.id."+resId+")).perform(replaceText(\""+input+"\"),closeSoftKeyboard());\n\n";

    return stm;
}

```

Código fuente final usando framework Espresso

```

takeScreenshot( name: "test"+i);
i++;
onView(withId(R.id.buttonJugar)).perform(click());

takeScreenshot( name: "test"+i);|
i++;
onView(withId(R.id.editTextApodo)).perform(replaceText( stringToBeSet: "Dau"),closeSoftKeyboard());

```
